#CSPM FOR IAAS AND SAAS

THE TIMES OF CLOUD SECURITY POSTURE MANAGEMENT (CSPM)

As Gartner says nearly all successful attacks on cloud services are the result of customer misconfiguration, mismanagement and mistakes. Evaluating the risk and compliance posture in a multi-cloud environment is vital to continuity.

WHY IS CSPM NEEDED?

EASY TO INTRODUCE MISCONFIGURATIONS IN CLOUD ENVIRONMENT

The turnaround time to introduce new features and services in clouds has reduced due to microservices, containers and other developer tools. However, security is often compromised as the access of new services continue growing compared to monolith apps.

STRICHER COMPLIANCE AND DATA PRIVACY REGULATIONS

Regulations like GDPR, CCPA, NIST, HIPAA mandate that data be secured in particular formats. Non-compliance in maintenance of PII, PCI, or any other sensitive info in the cloud environment can set organizations for huge penalties, losses, and data breaches.

LACK OF CENTRALIZED MONITORING AND LOGGING

Complexity of enterprise cloud environments containing millions of resources curtails visibility in the cloud environment making it difficult to monitor conspired security posture. Lack of regular audits of resources and configurations can lead to security flaws.

#CSPM FOR IAAS AND SAAS

HOW CIPHERCLOUD CSPM HELPS?

CipherCloud’s CSPM performs

- An automated assessment of your cloud landscape against well-defined security and compliance guidelines.
- Provides a comprehensive view of your cloud risk posture through intuitive and drill-down dashboards.
- Reduces operational complexity in managing security across all your cloud applications, prevents data loss due to misconfigurations.

CipherCloud CSPM benefits

- Discover your cloud assets in iaas and Saas clouds
- Gain deep visibility into usage and security events
- Identify security and compliance violations along with security issues due to common misconfigurations
- Secure Open Baskets (OSS) iaas, Saas configuration
- Use monitoring and alerting to help see ops prepare detailed CI/CD/CO reports for audits

PREVENT SECURITY MISCONFIGURATIONS IN A MULTI-CLOUD ENVIRONMENT
